

About Intensecomp

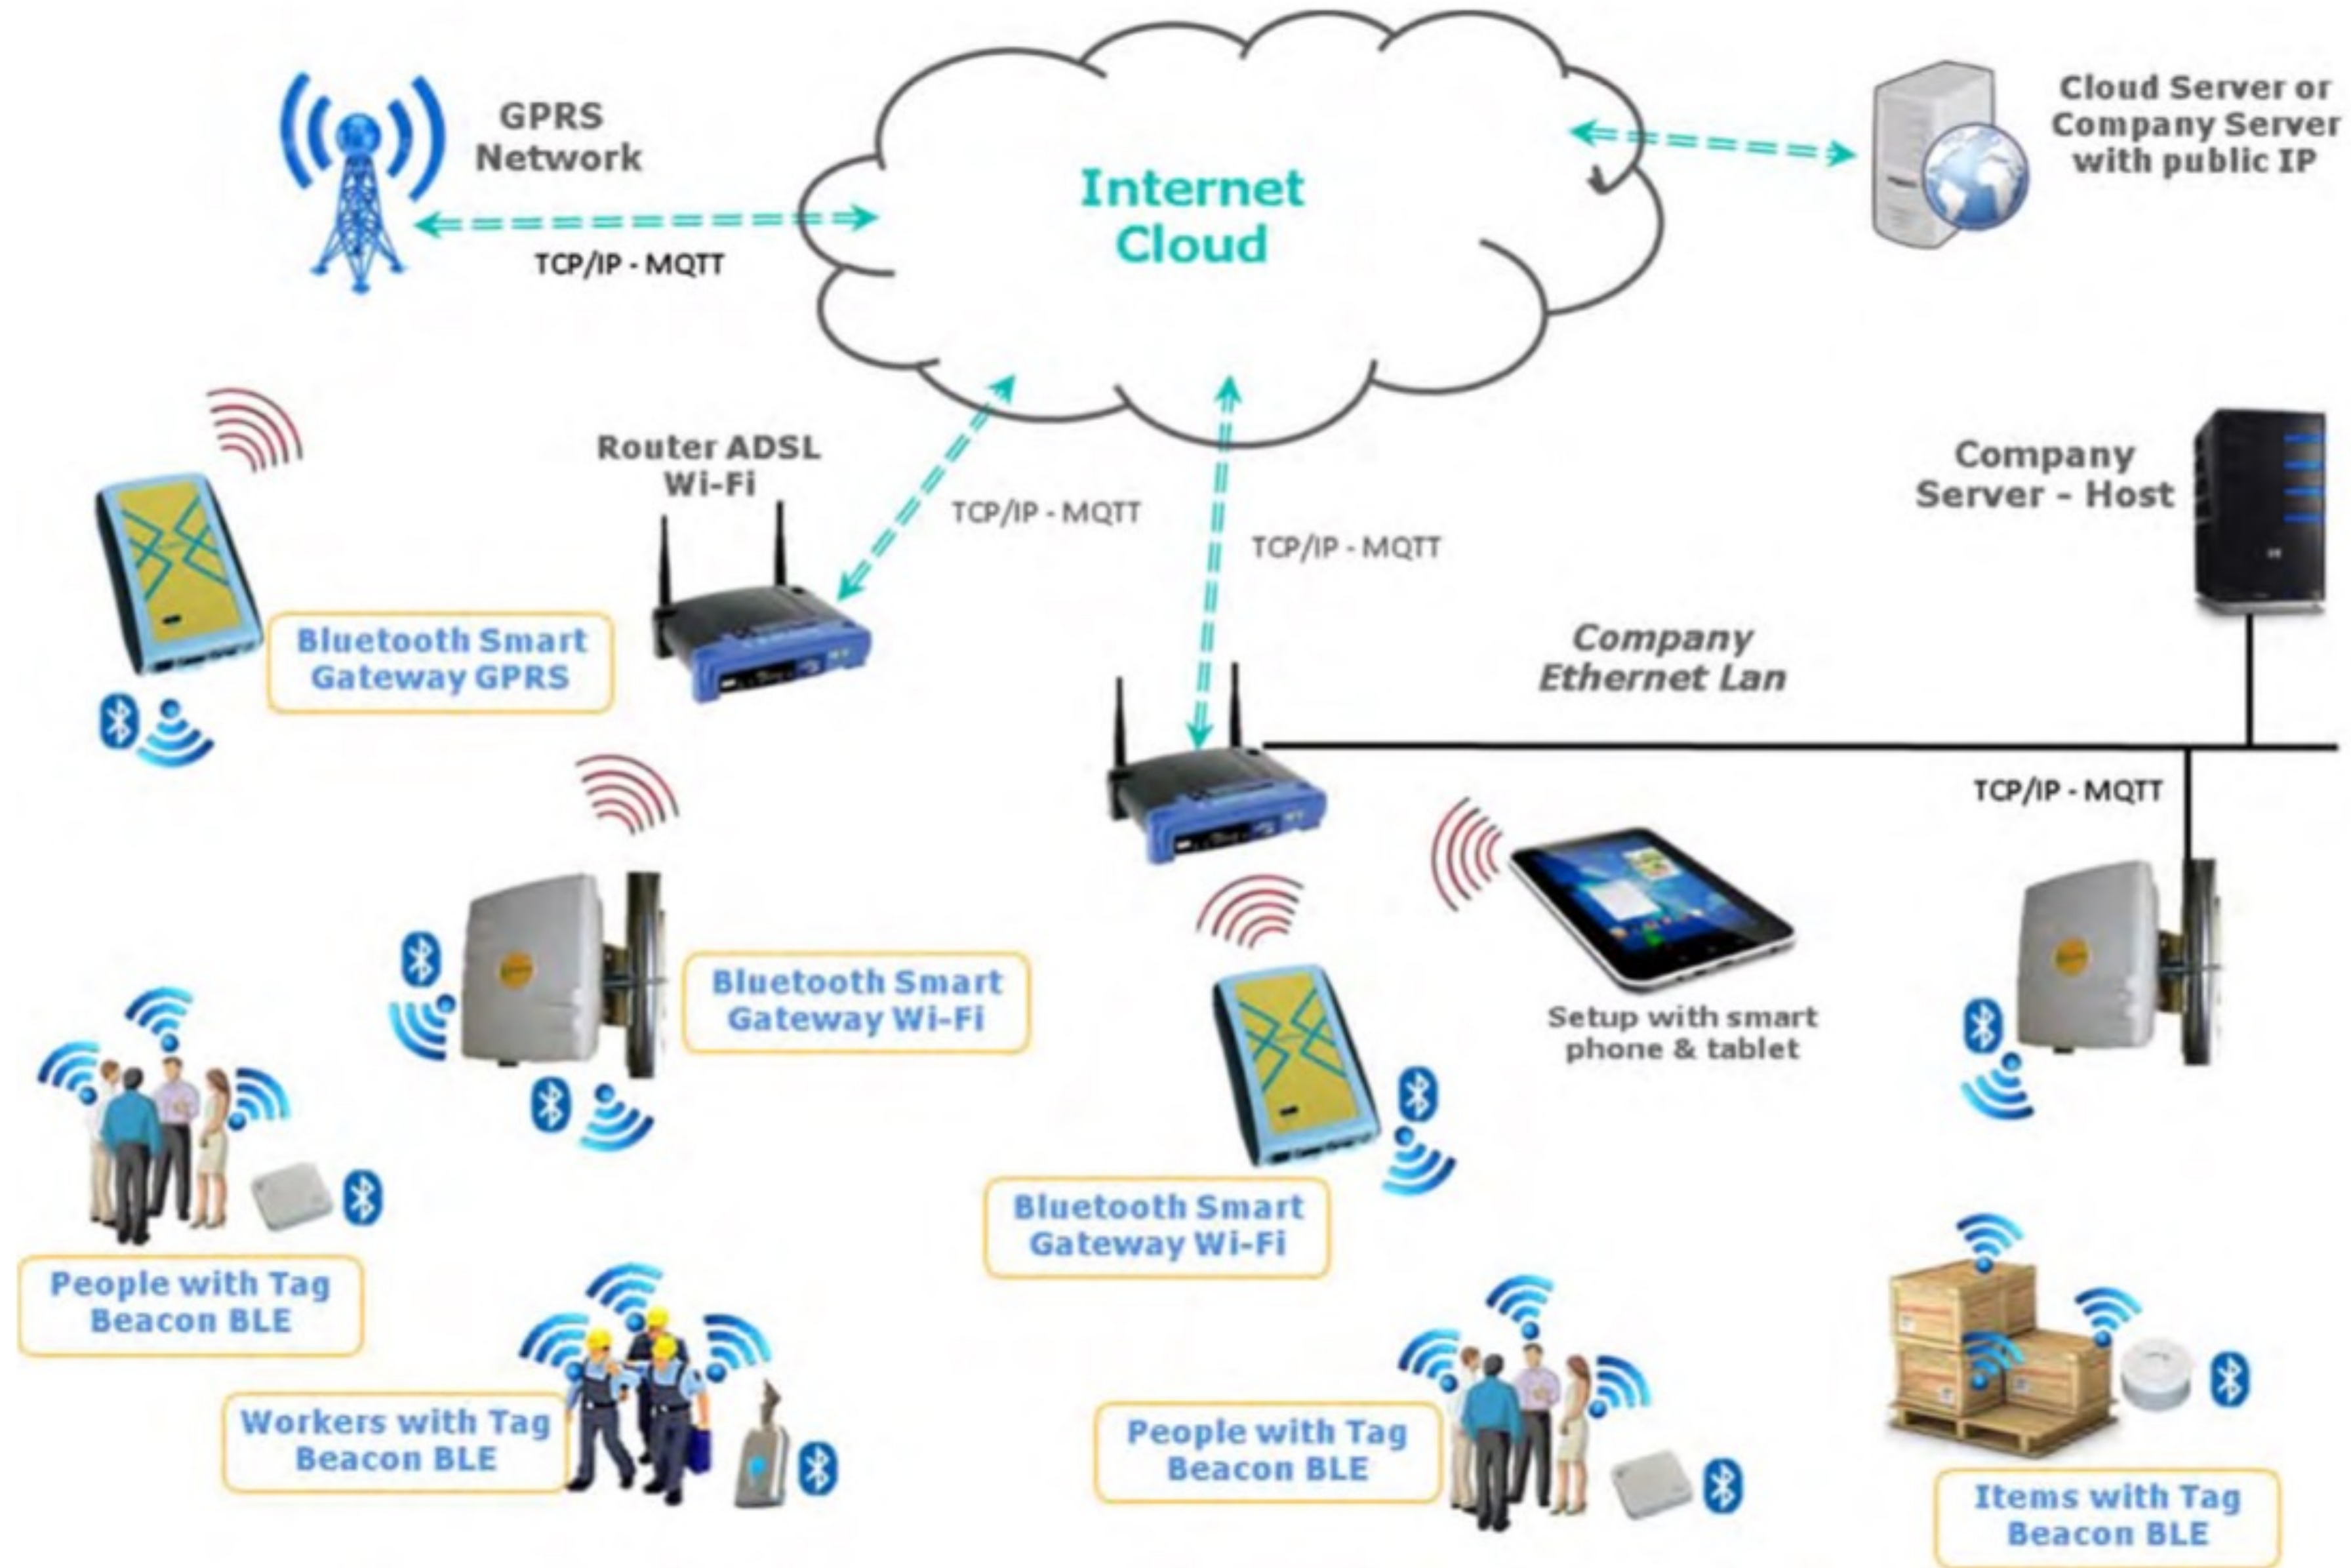

Introduction to Product & Services

INTENSECOMP PTE LTD

www.intensecomp.com

Real-Time **Asset Tracking**

System Overview

1

Locate and monitors personnel and assets in real time using WIFI and BLE Technology.

2

Integration to external software and data exchange via web services API.

3

Extensive notifications and triggered events.

4

Fully scalable, enterprise-class system.

Additional Features & Tags

1

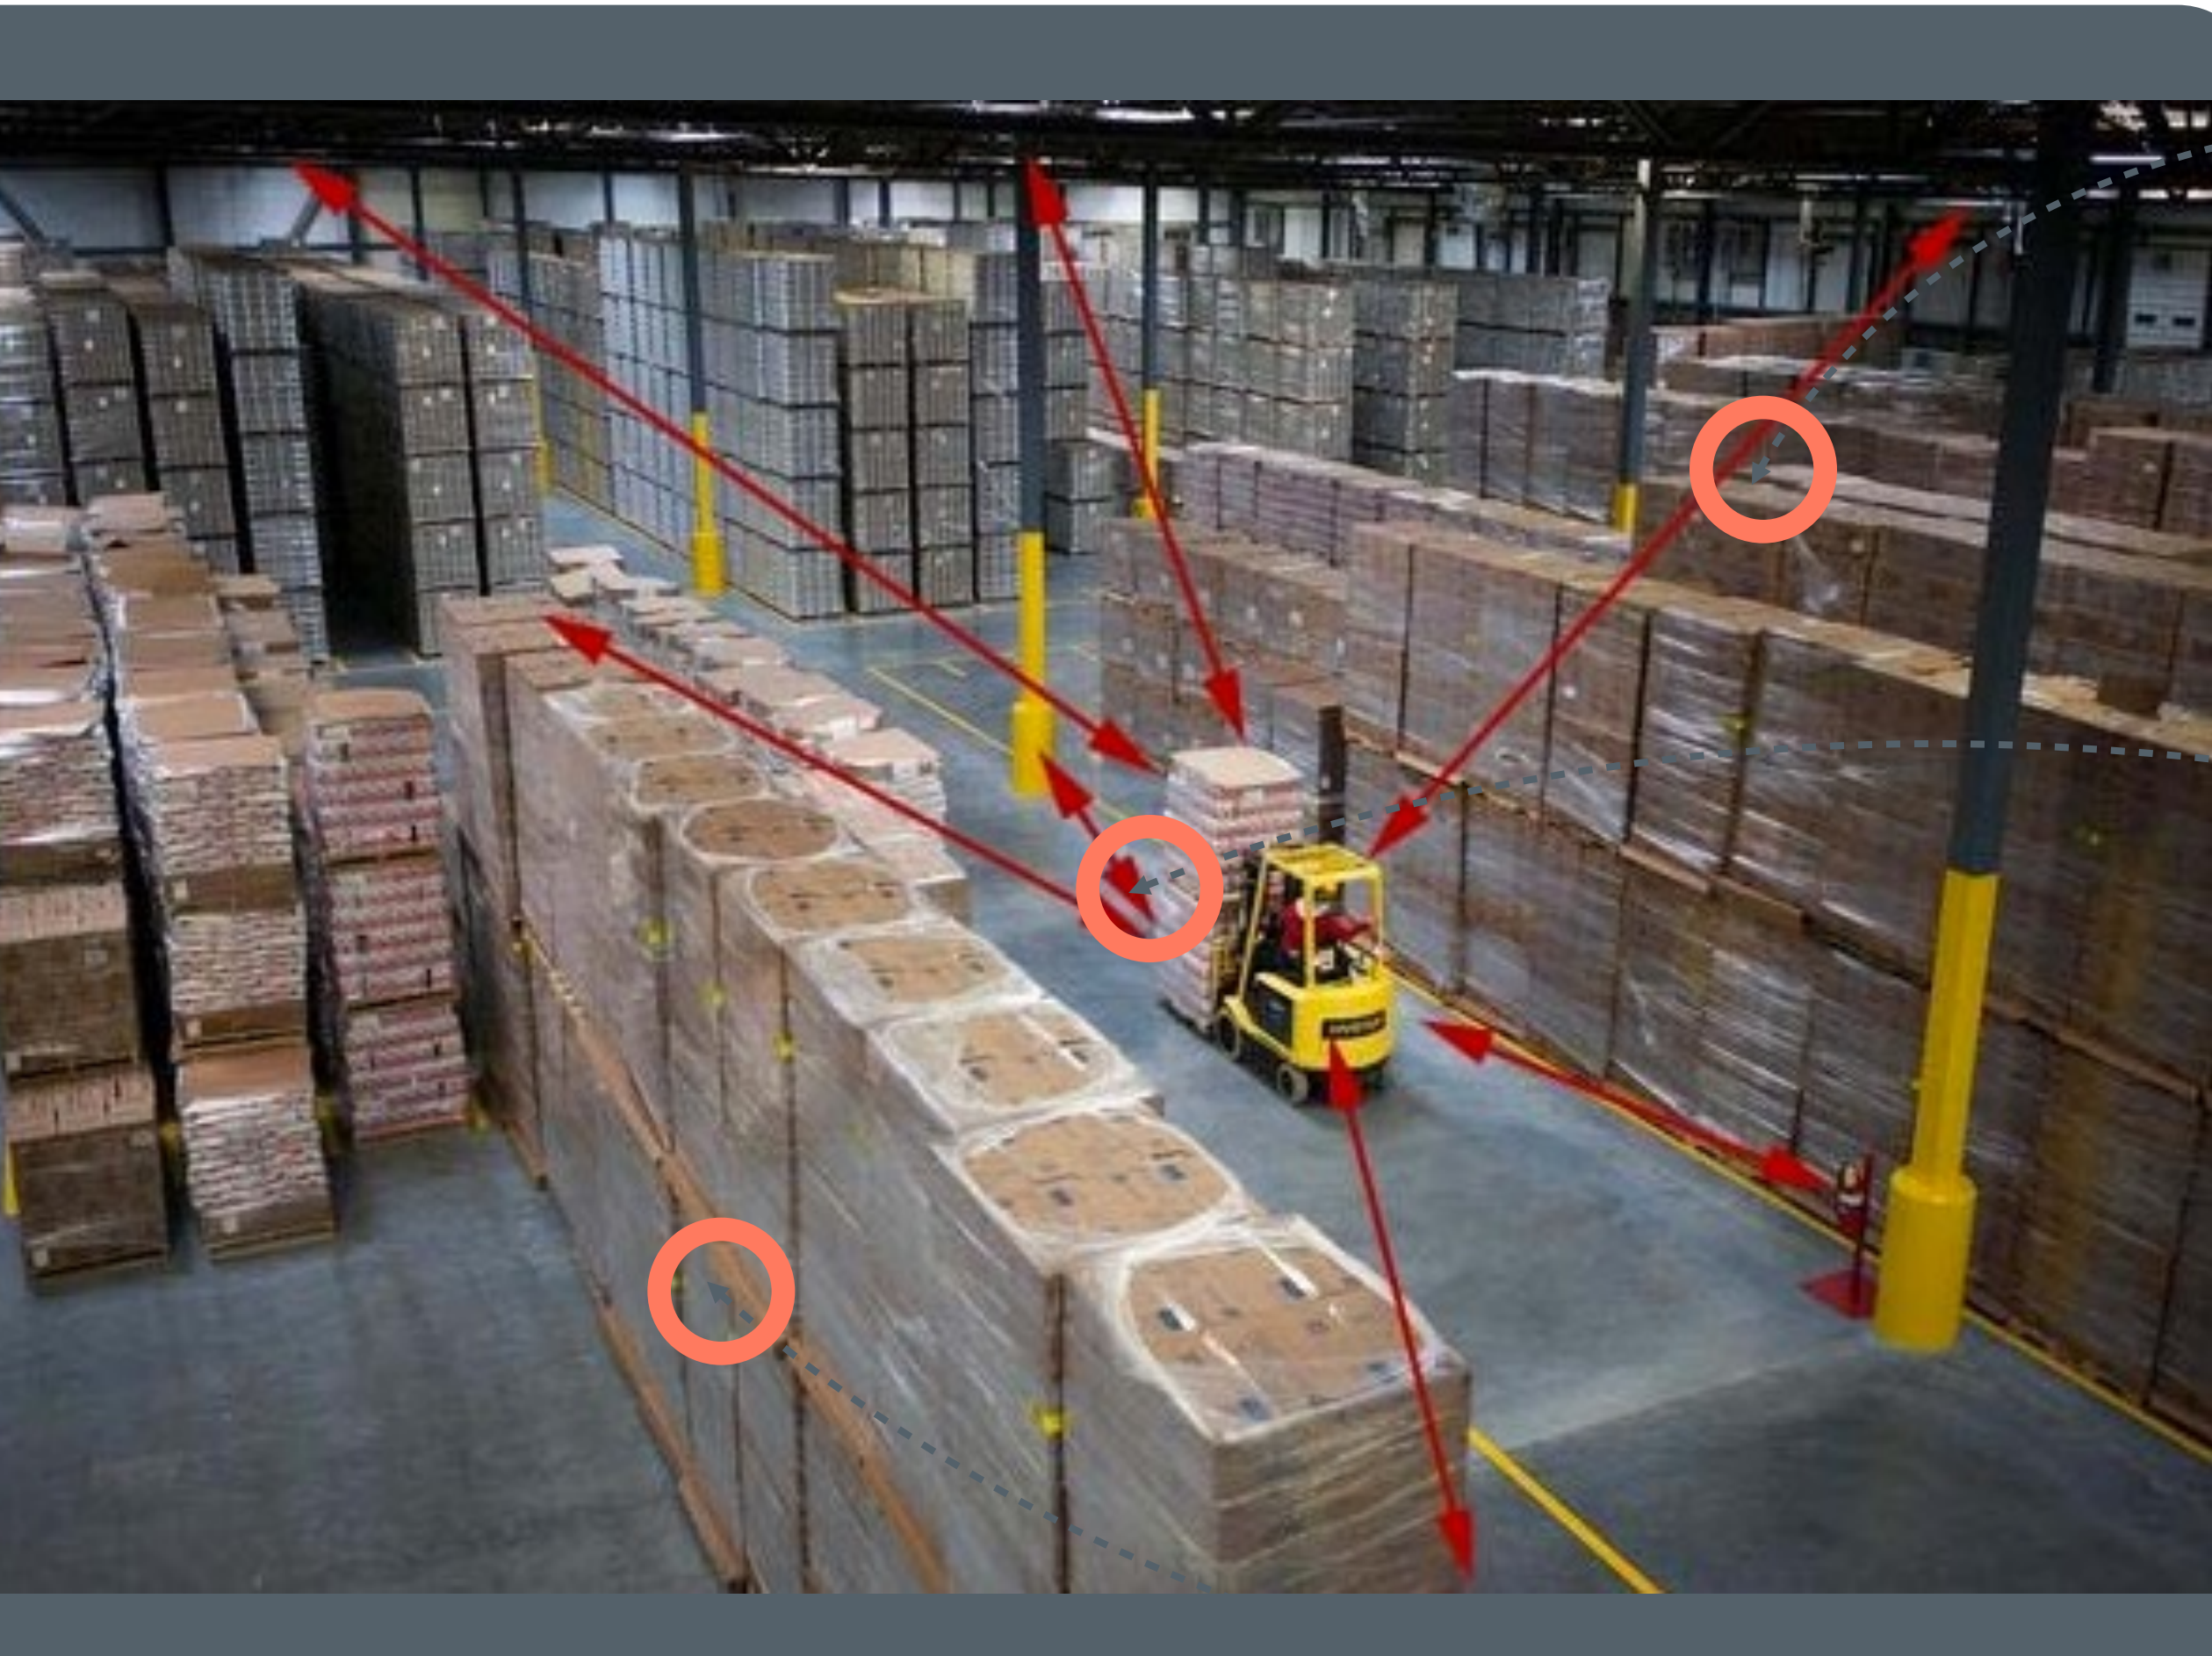

Monitor temperature, sensors, movement and etc using BLE tags.

2

Multiple sizes and types for assets, people and etc.

Indoor Positioning Technology

1

Feature:

Support both WIFI and BLE technology.

Algorithm to determine distance from device.

2

Feature:

Capturing of vast data.

Ability to view actions in a locations and movement nearby

3

Feature:

Comparable performance matrix across all area using Intensecomp analytics

Components of Technology

Software Platform

Feature:

InvenTrack Software Platform with GUI to visualize location activities.

Feature:

Smart Beacon with programmable buttons.

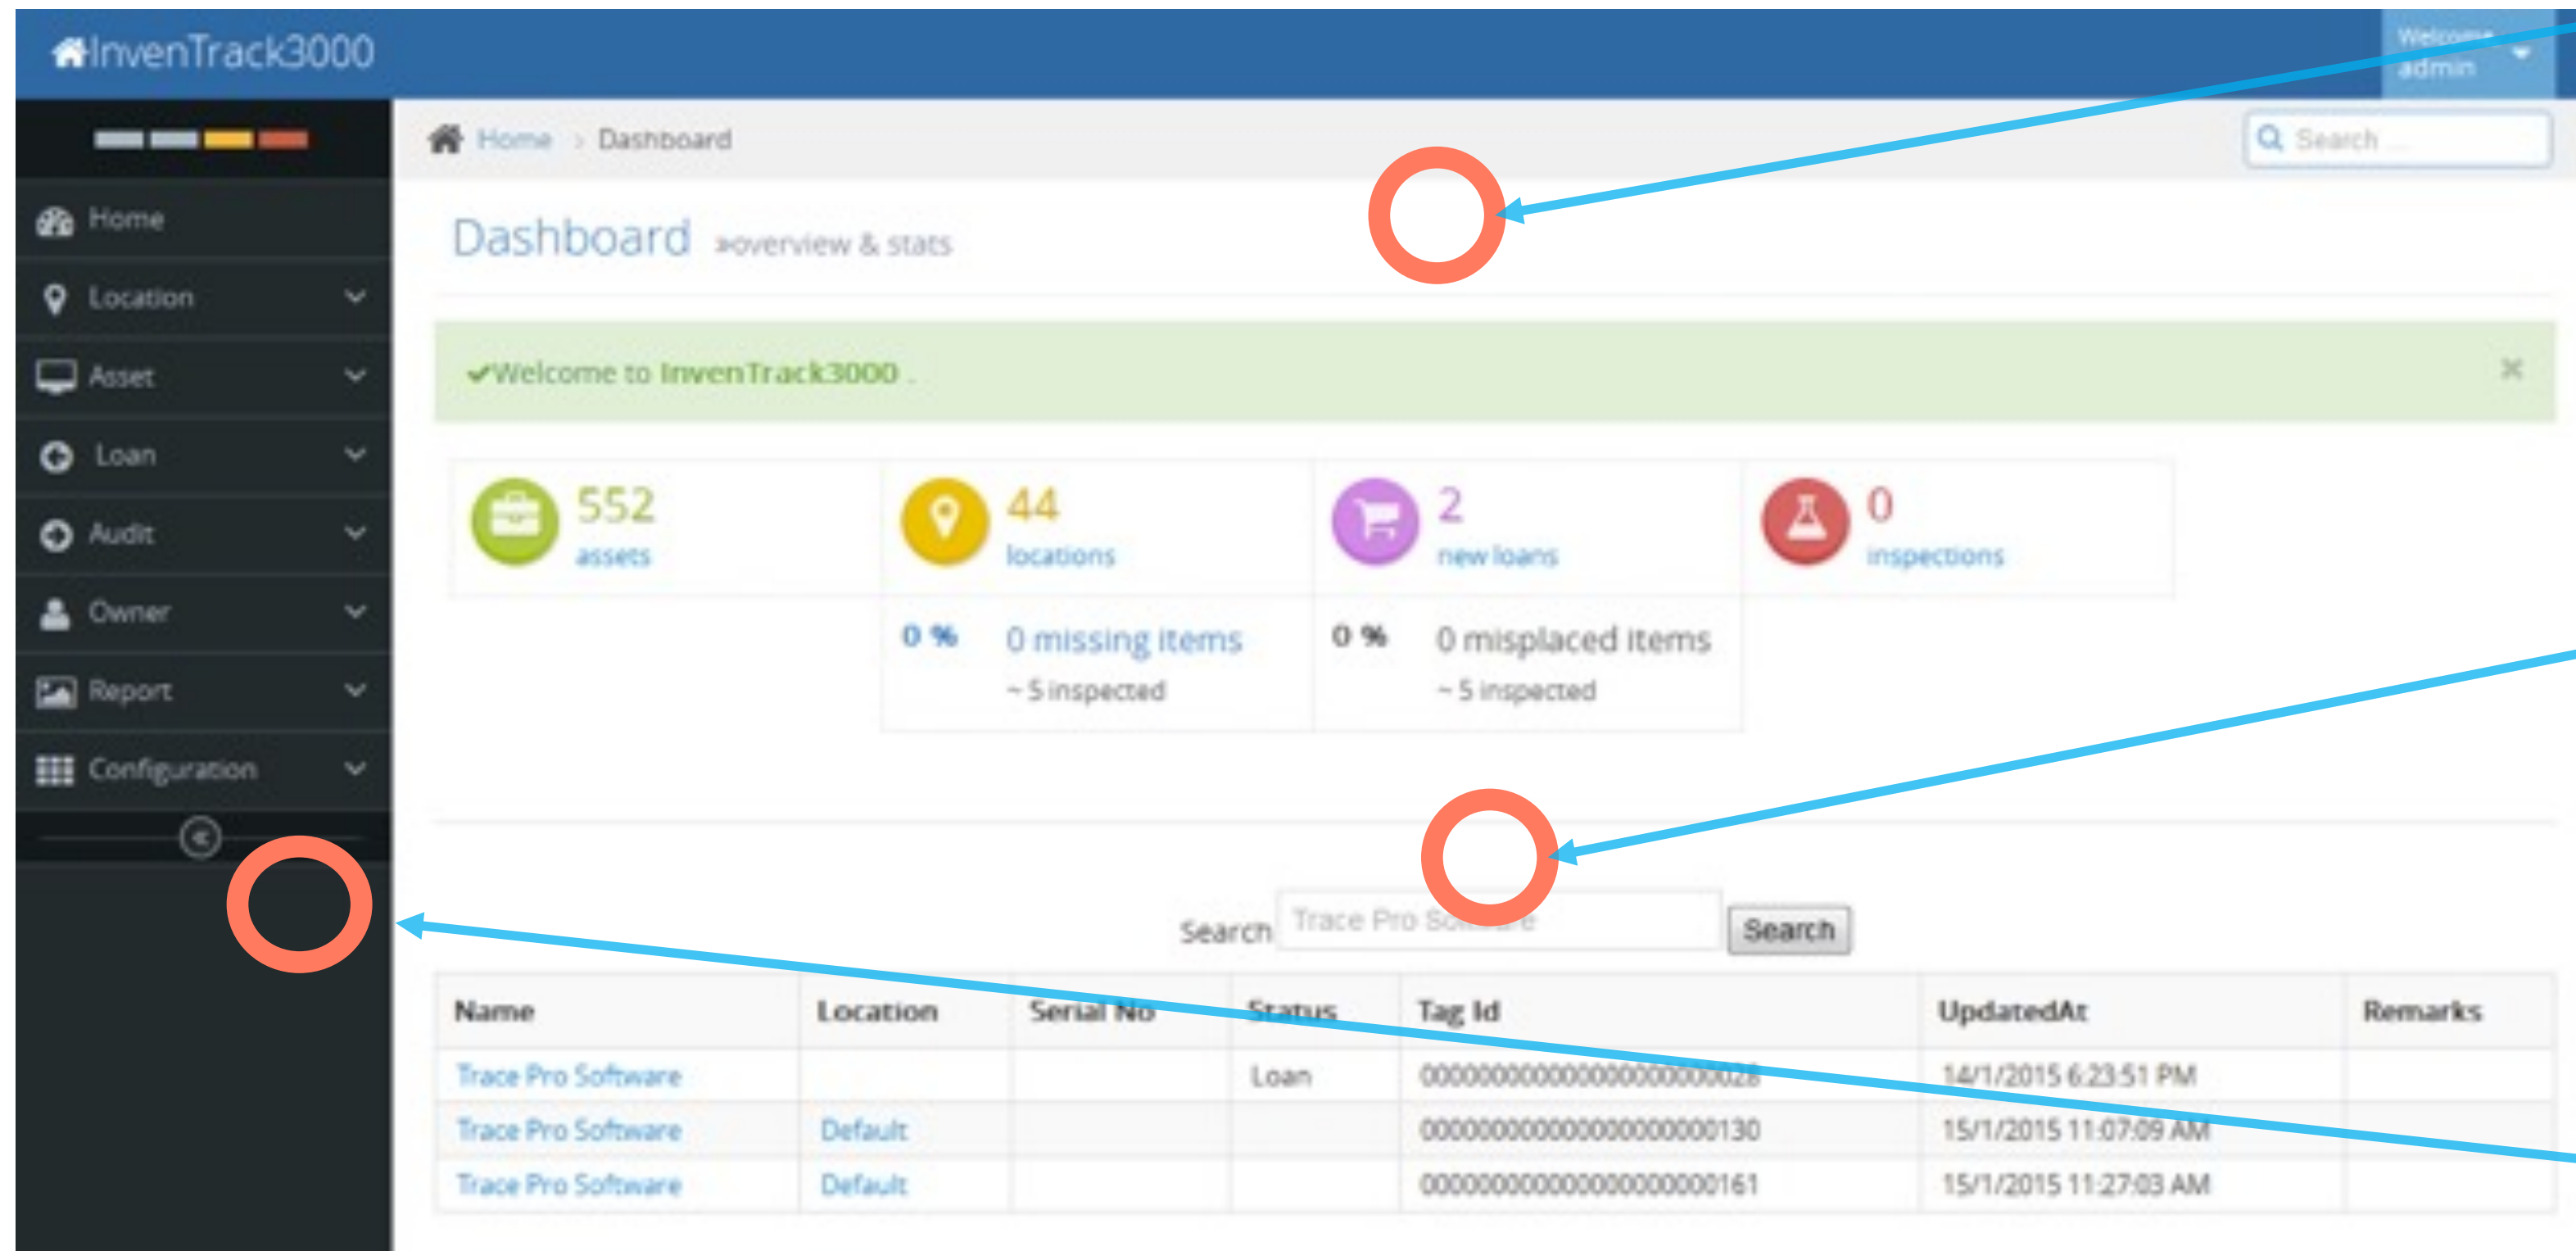

Location Scanner

Feature:

High throughput BLE location scanner to monitor positions of Smart Beacons

Features of InvenTrack

1

Feature:
Quick View Dashboard

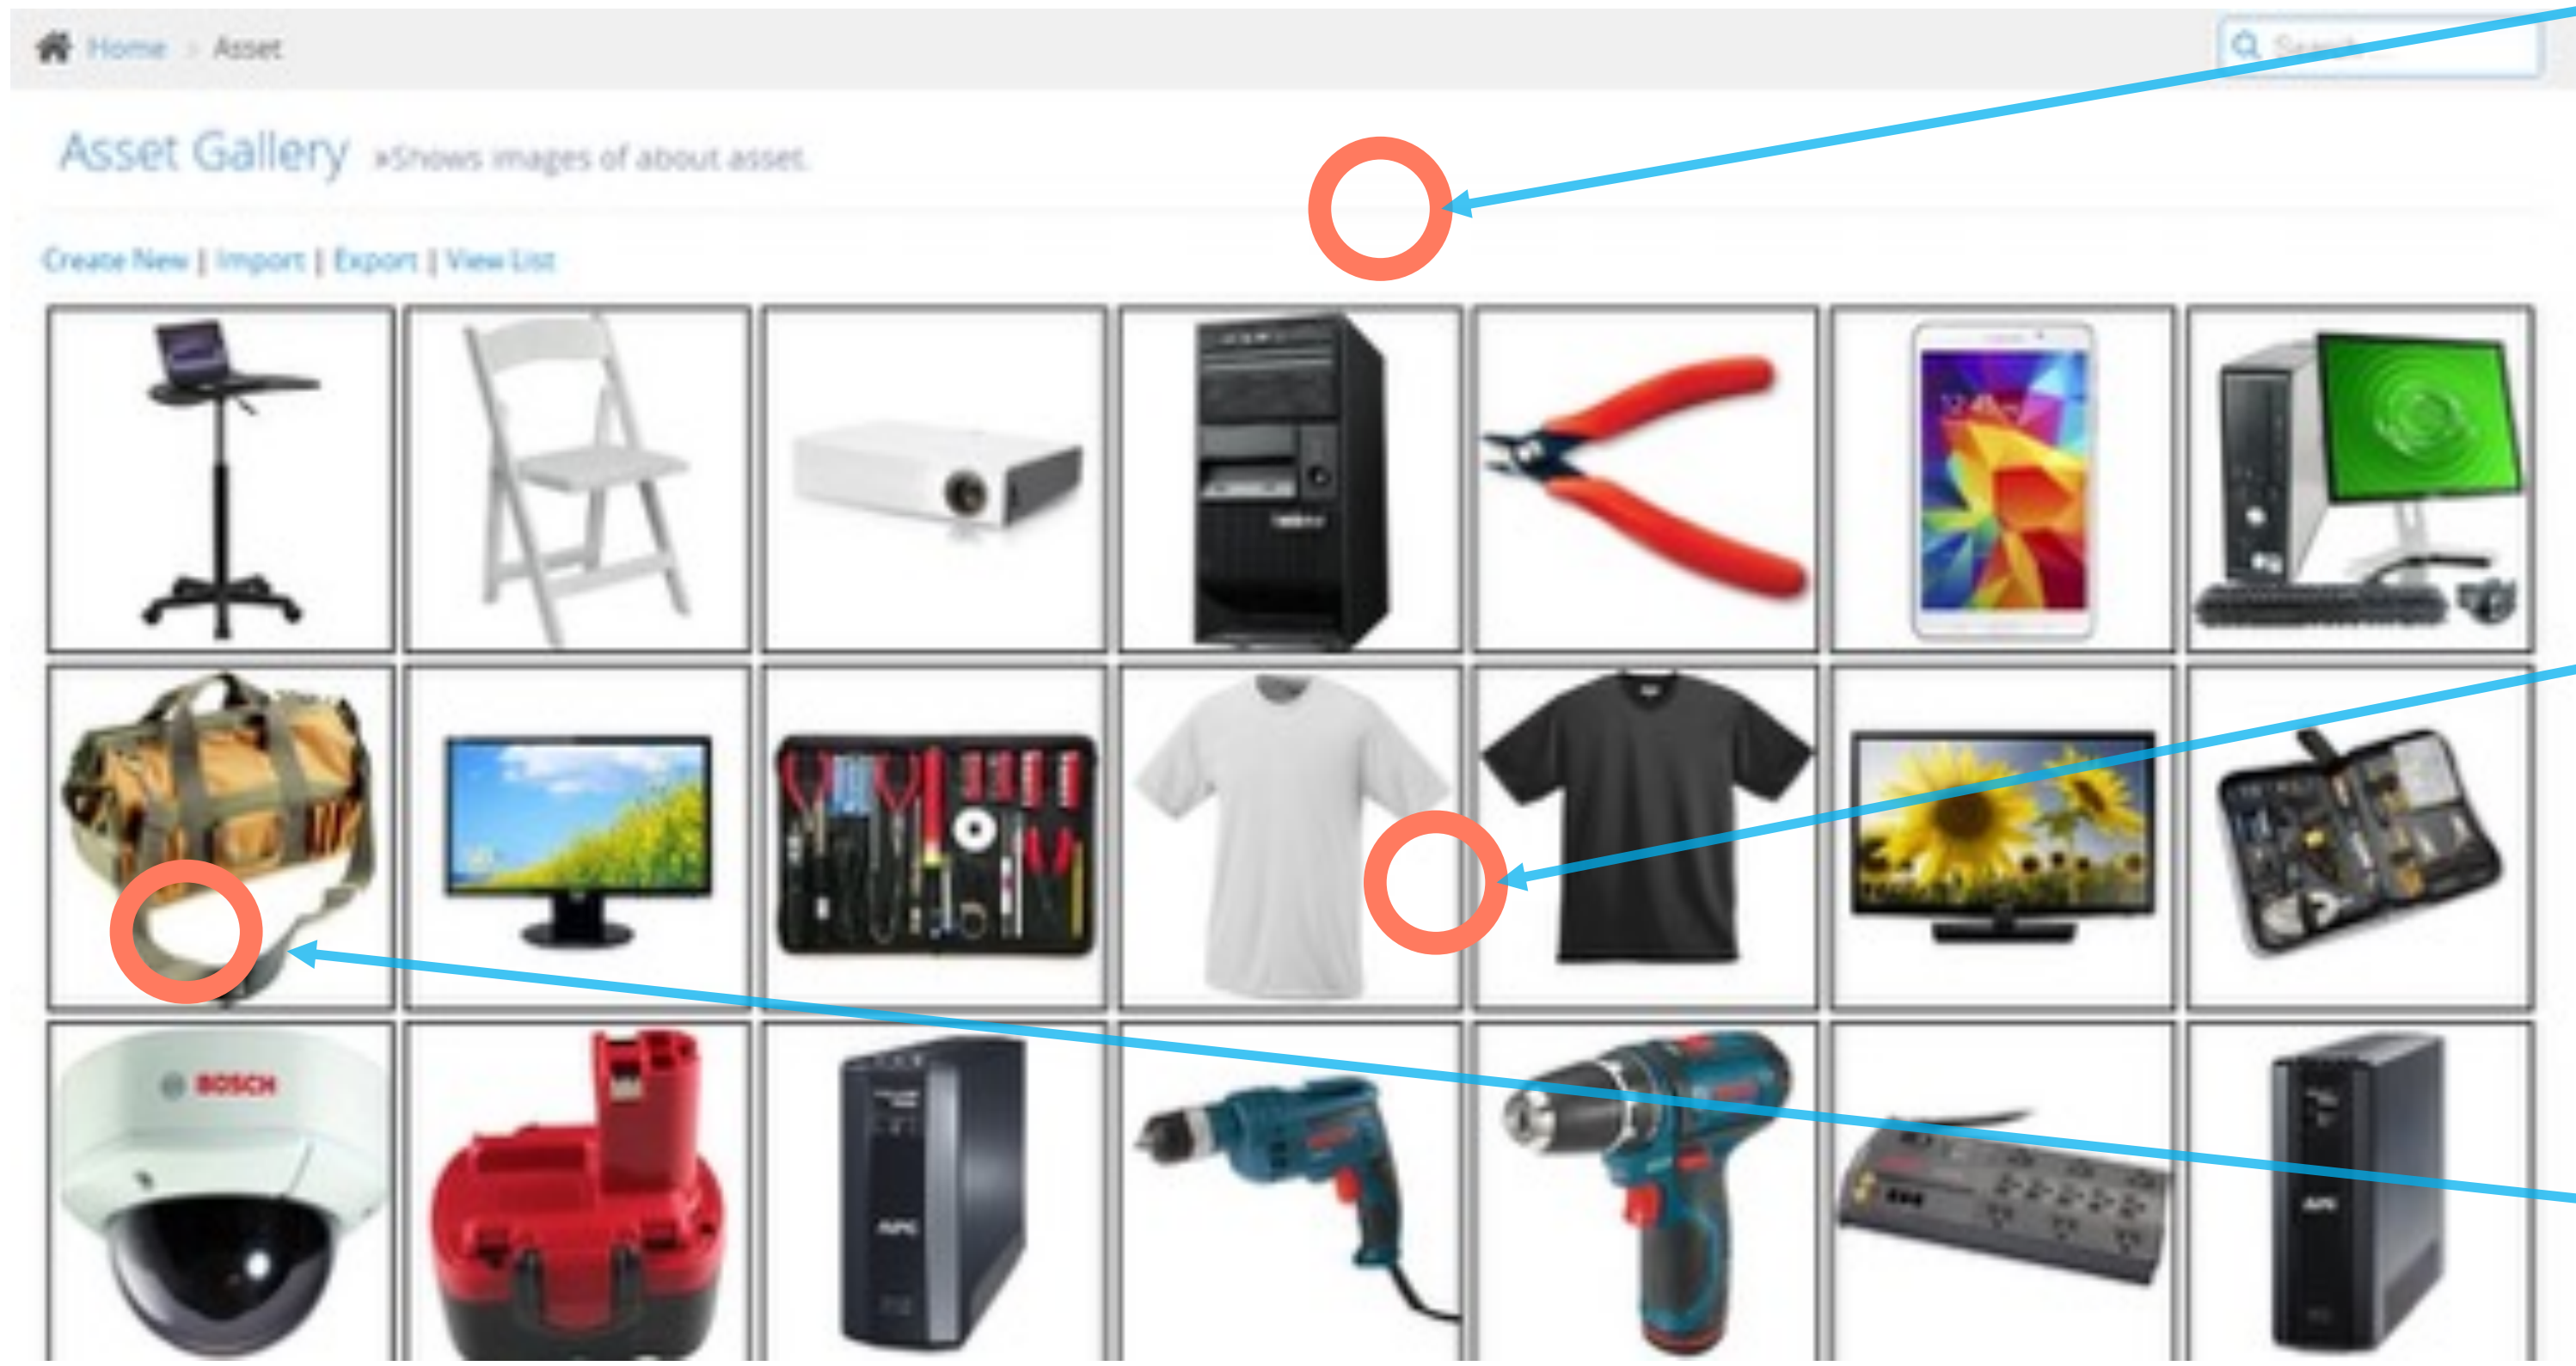

2

Feature:
Comprehensive Search Function

3

Feature:
Simple Navigation

Features of InvenTrack

1

Feature:
Asset Gallery View with Images

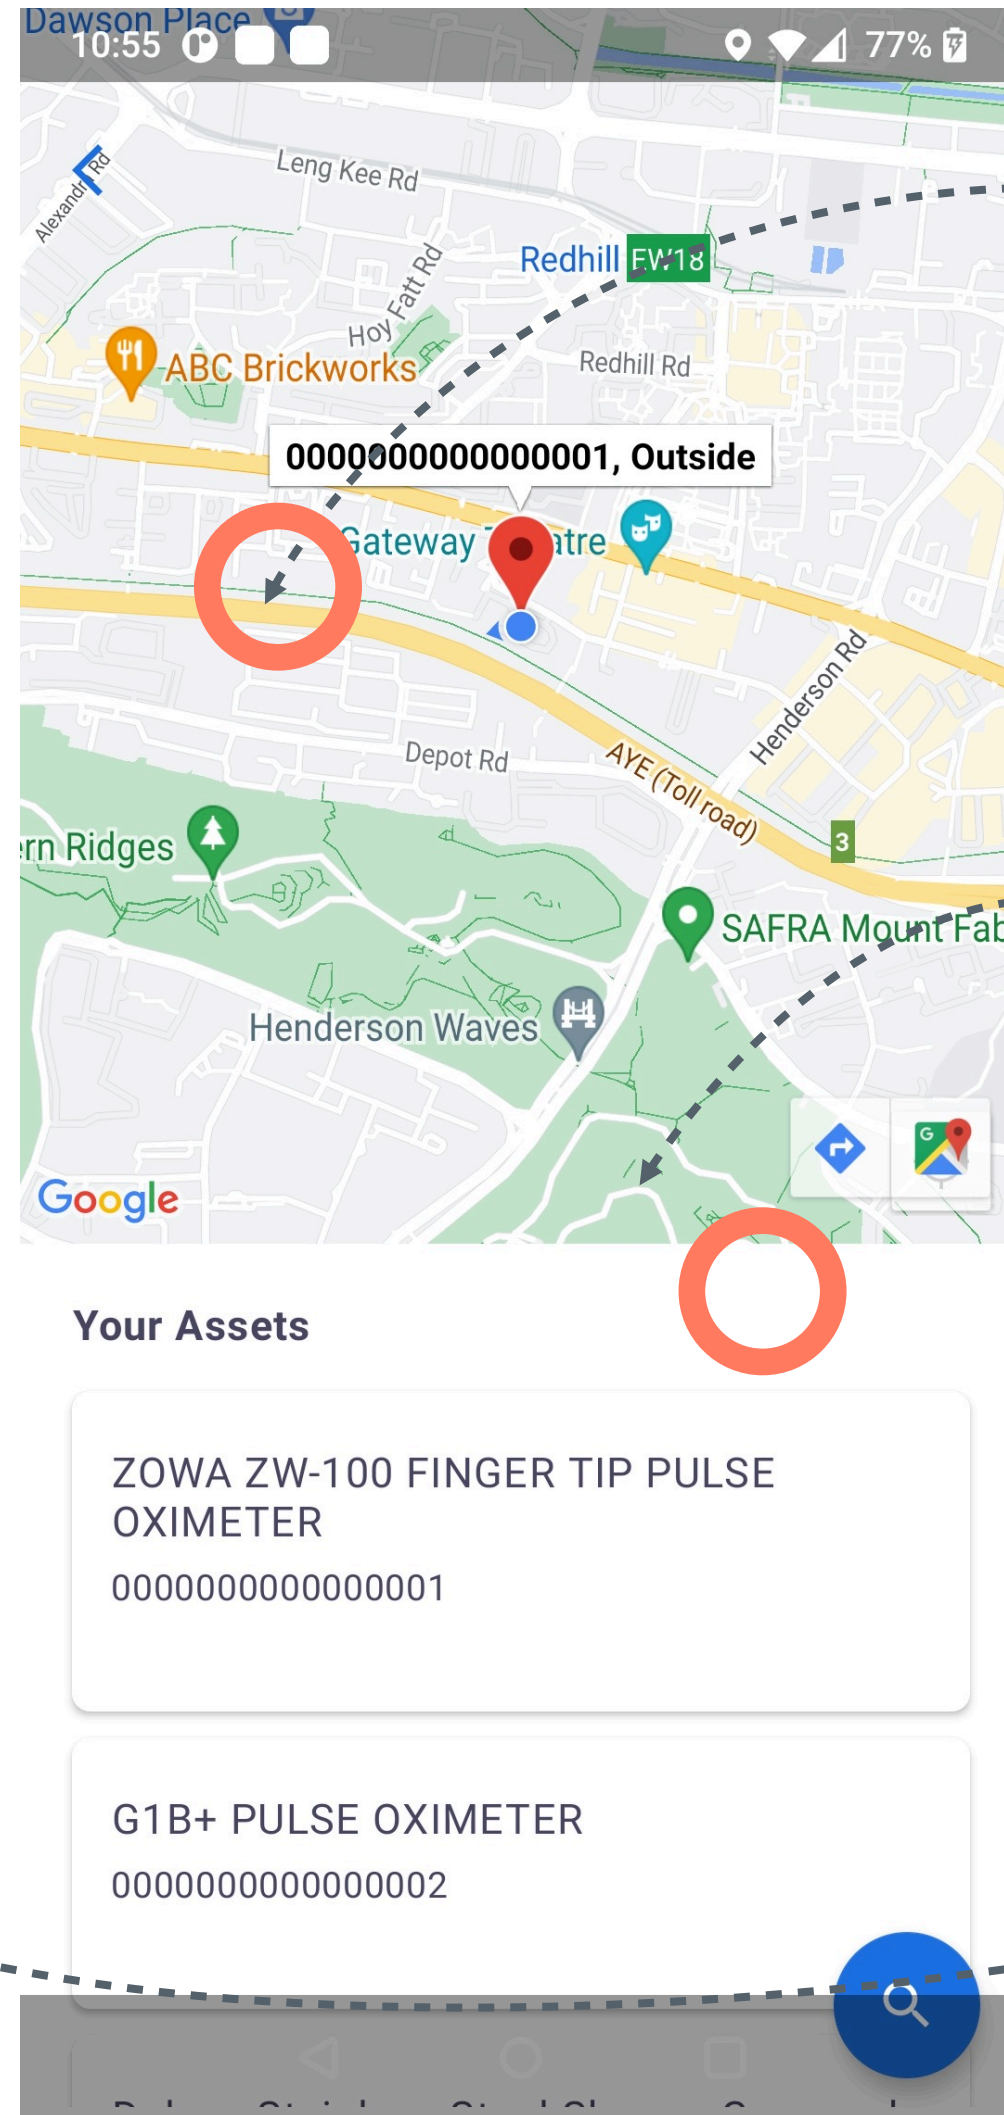

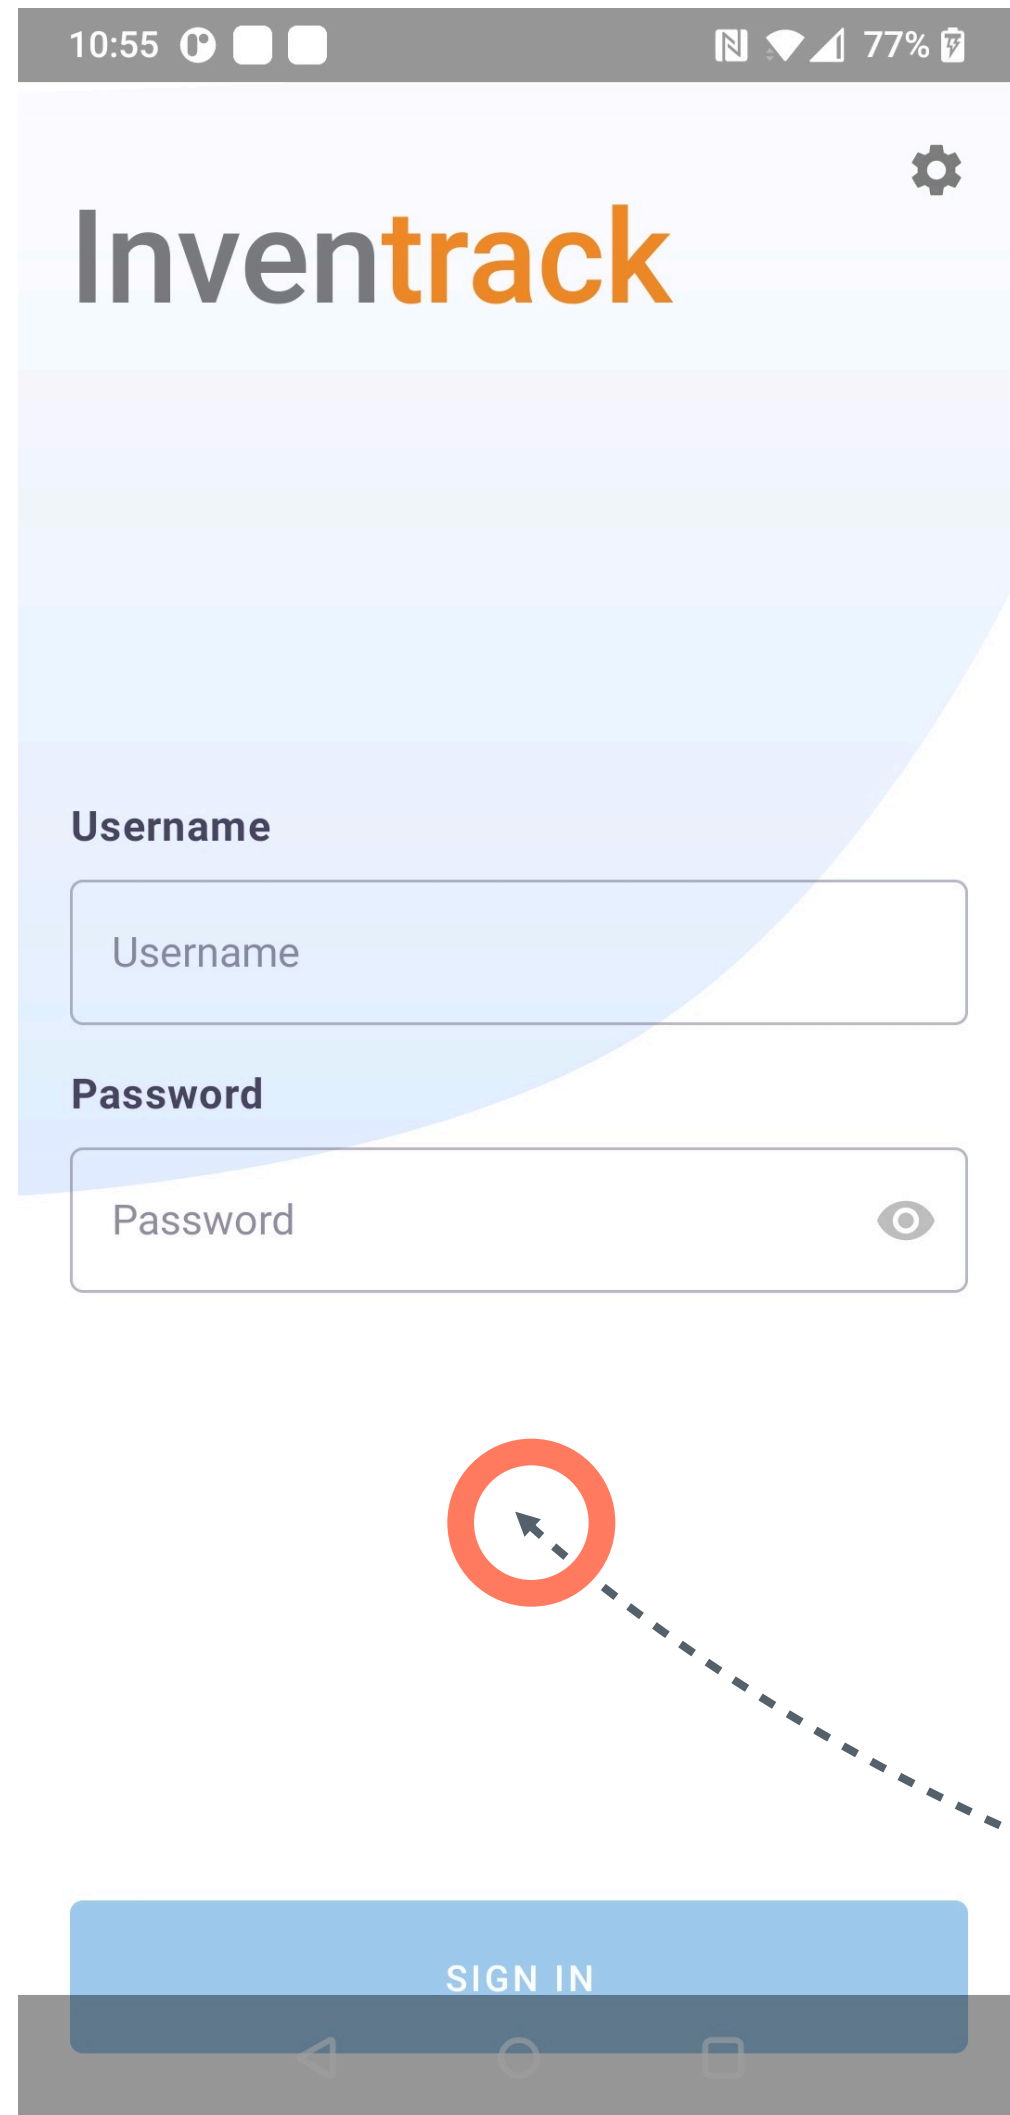

2

Feature:
Summary information on screen

3

Feature:
Easy Asset Identification With Images

Mobile App **InvenTrack**

1

Feature:

Real-time Location Update

2

Feature:

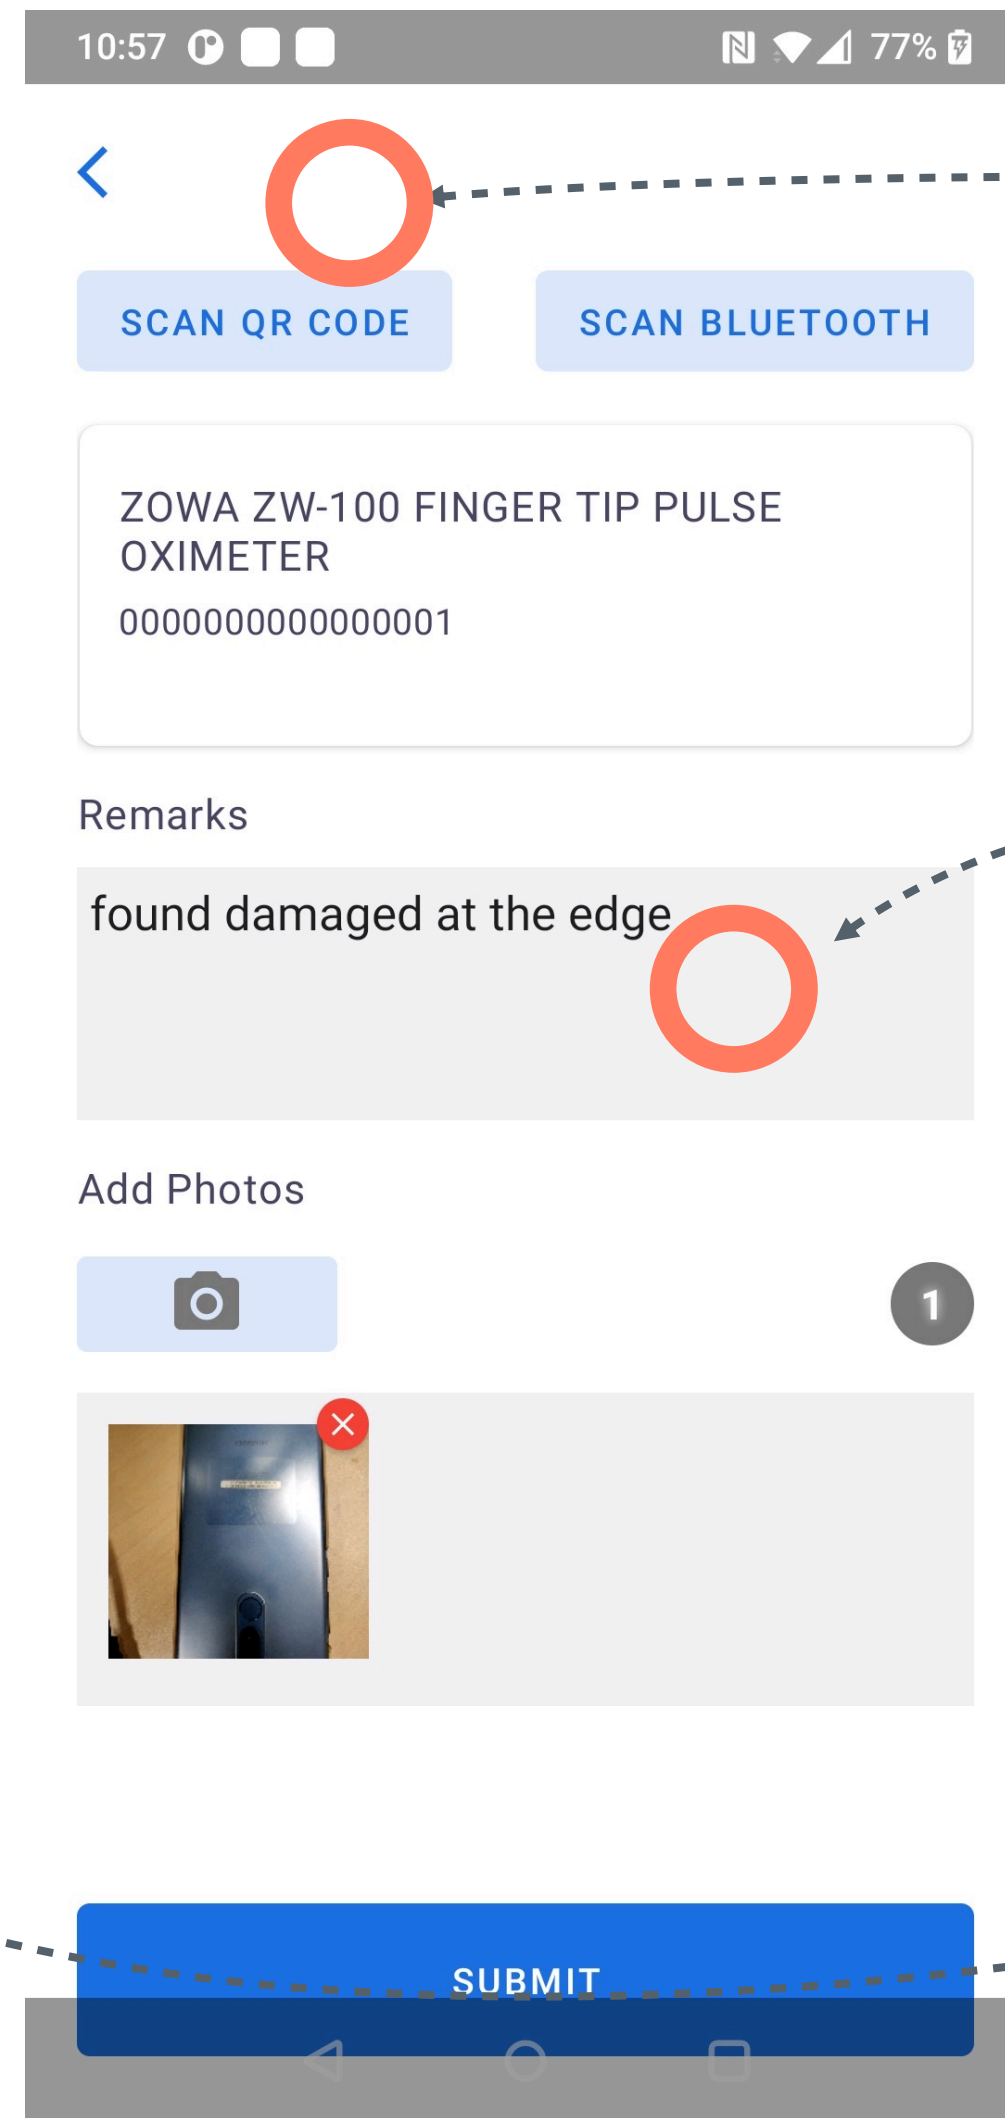

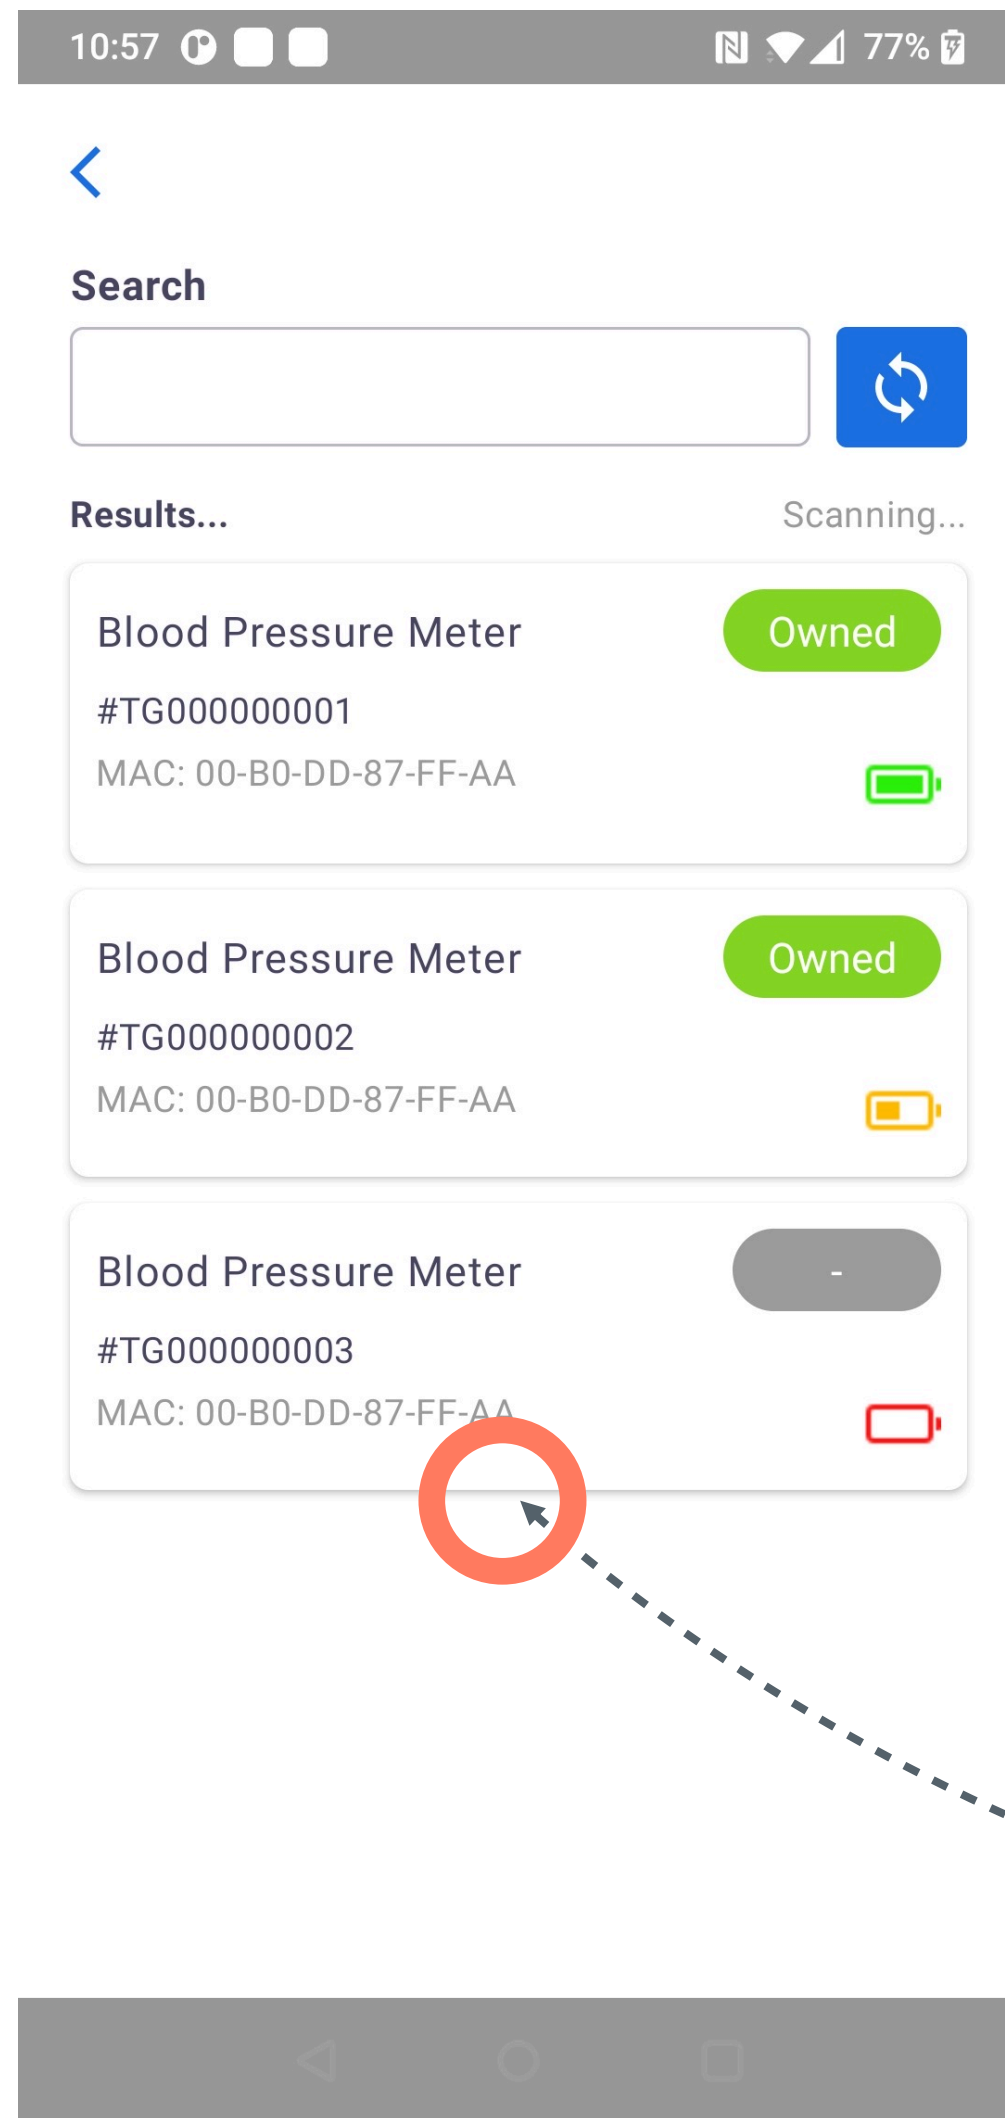

Capture important information for audit purpose

3

Feature:

Managed user access rights.

Mobile App InvenTrack

1

Feature:

Scan QR code and update location.

2

Feature:

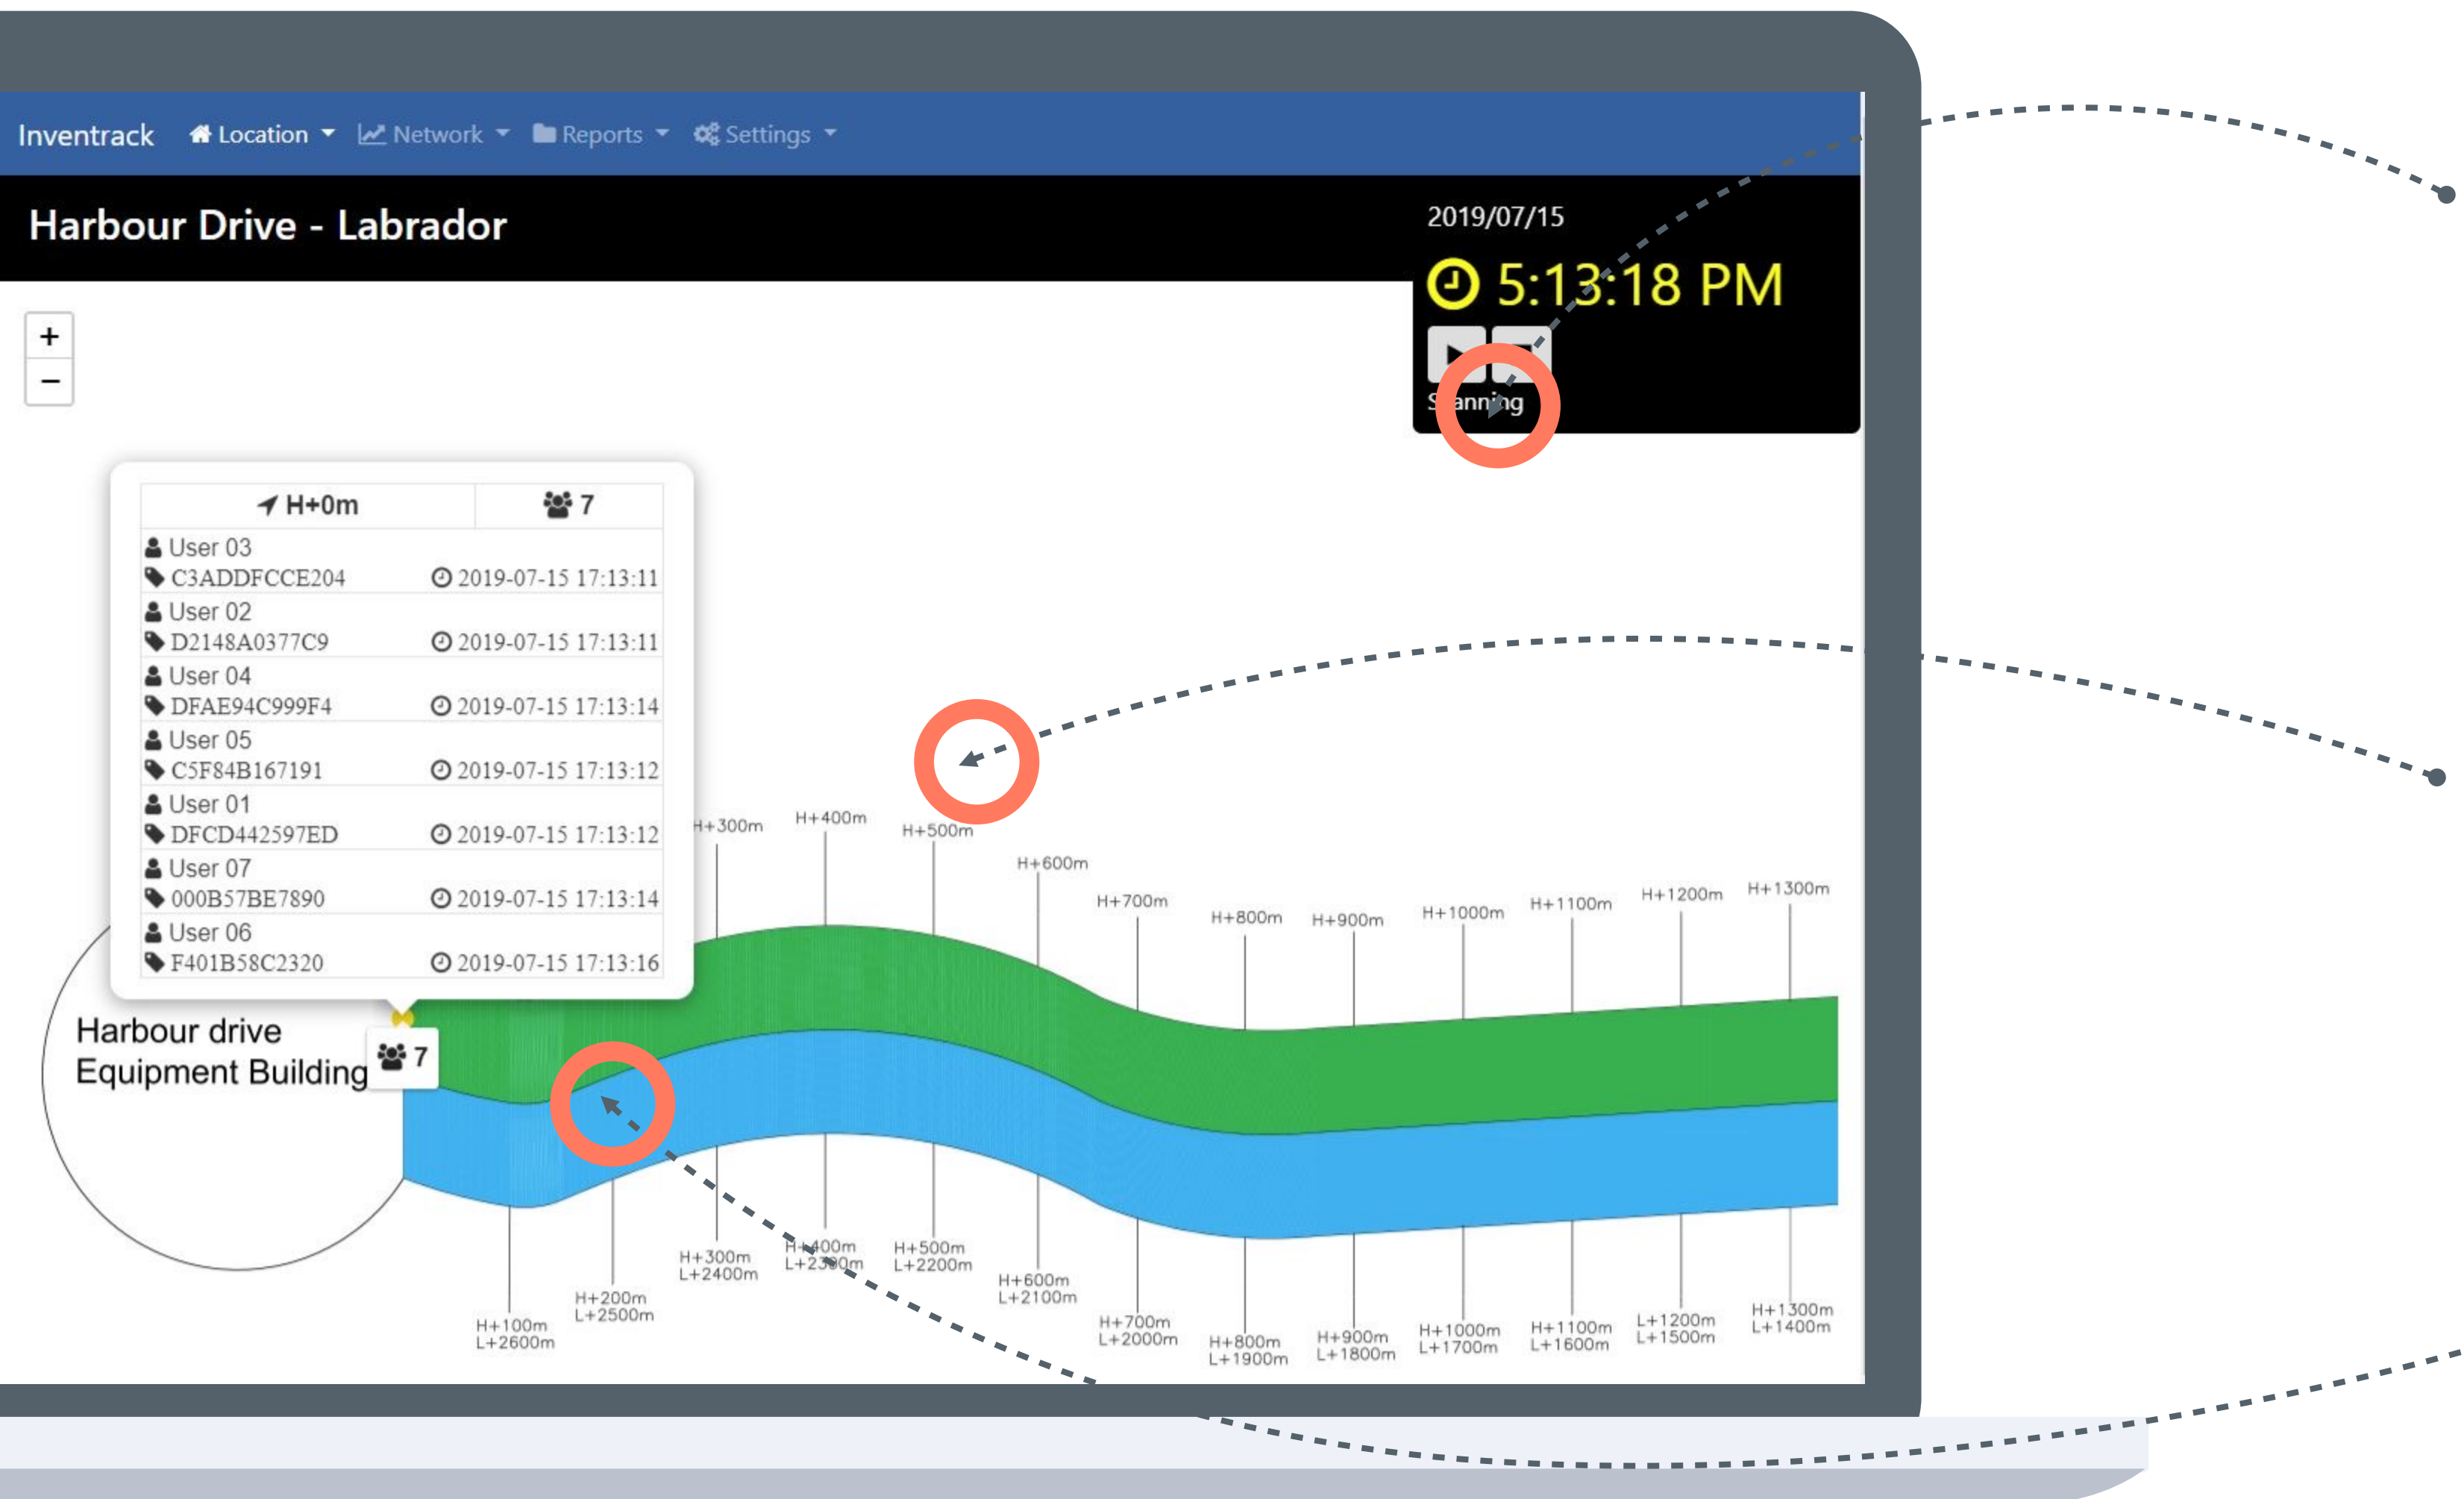

Capture important information for audit purpose

3

Feature:

Keeping track of asset location and its information with intelligent search.

Real-Time Location Status

1

Feature:
Time-Based Display.

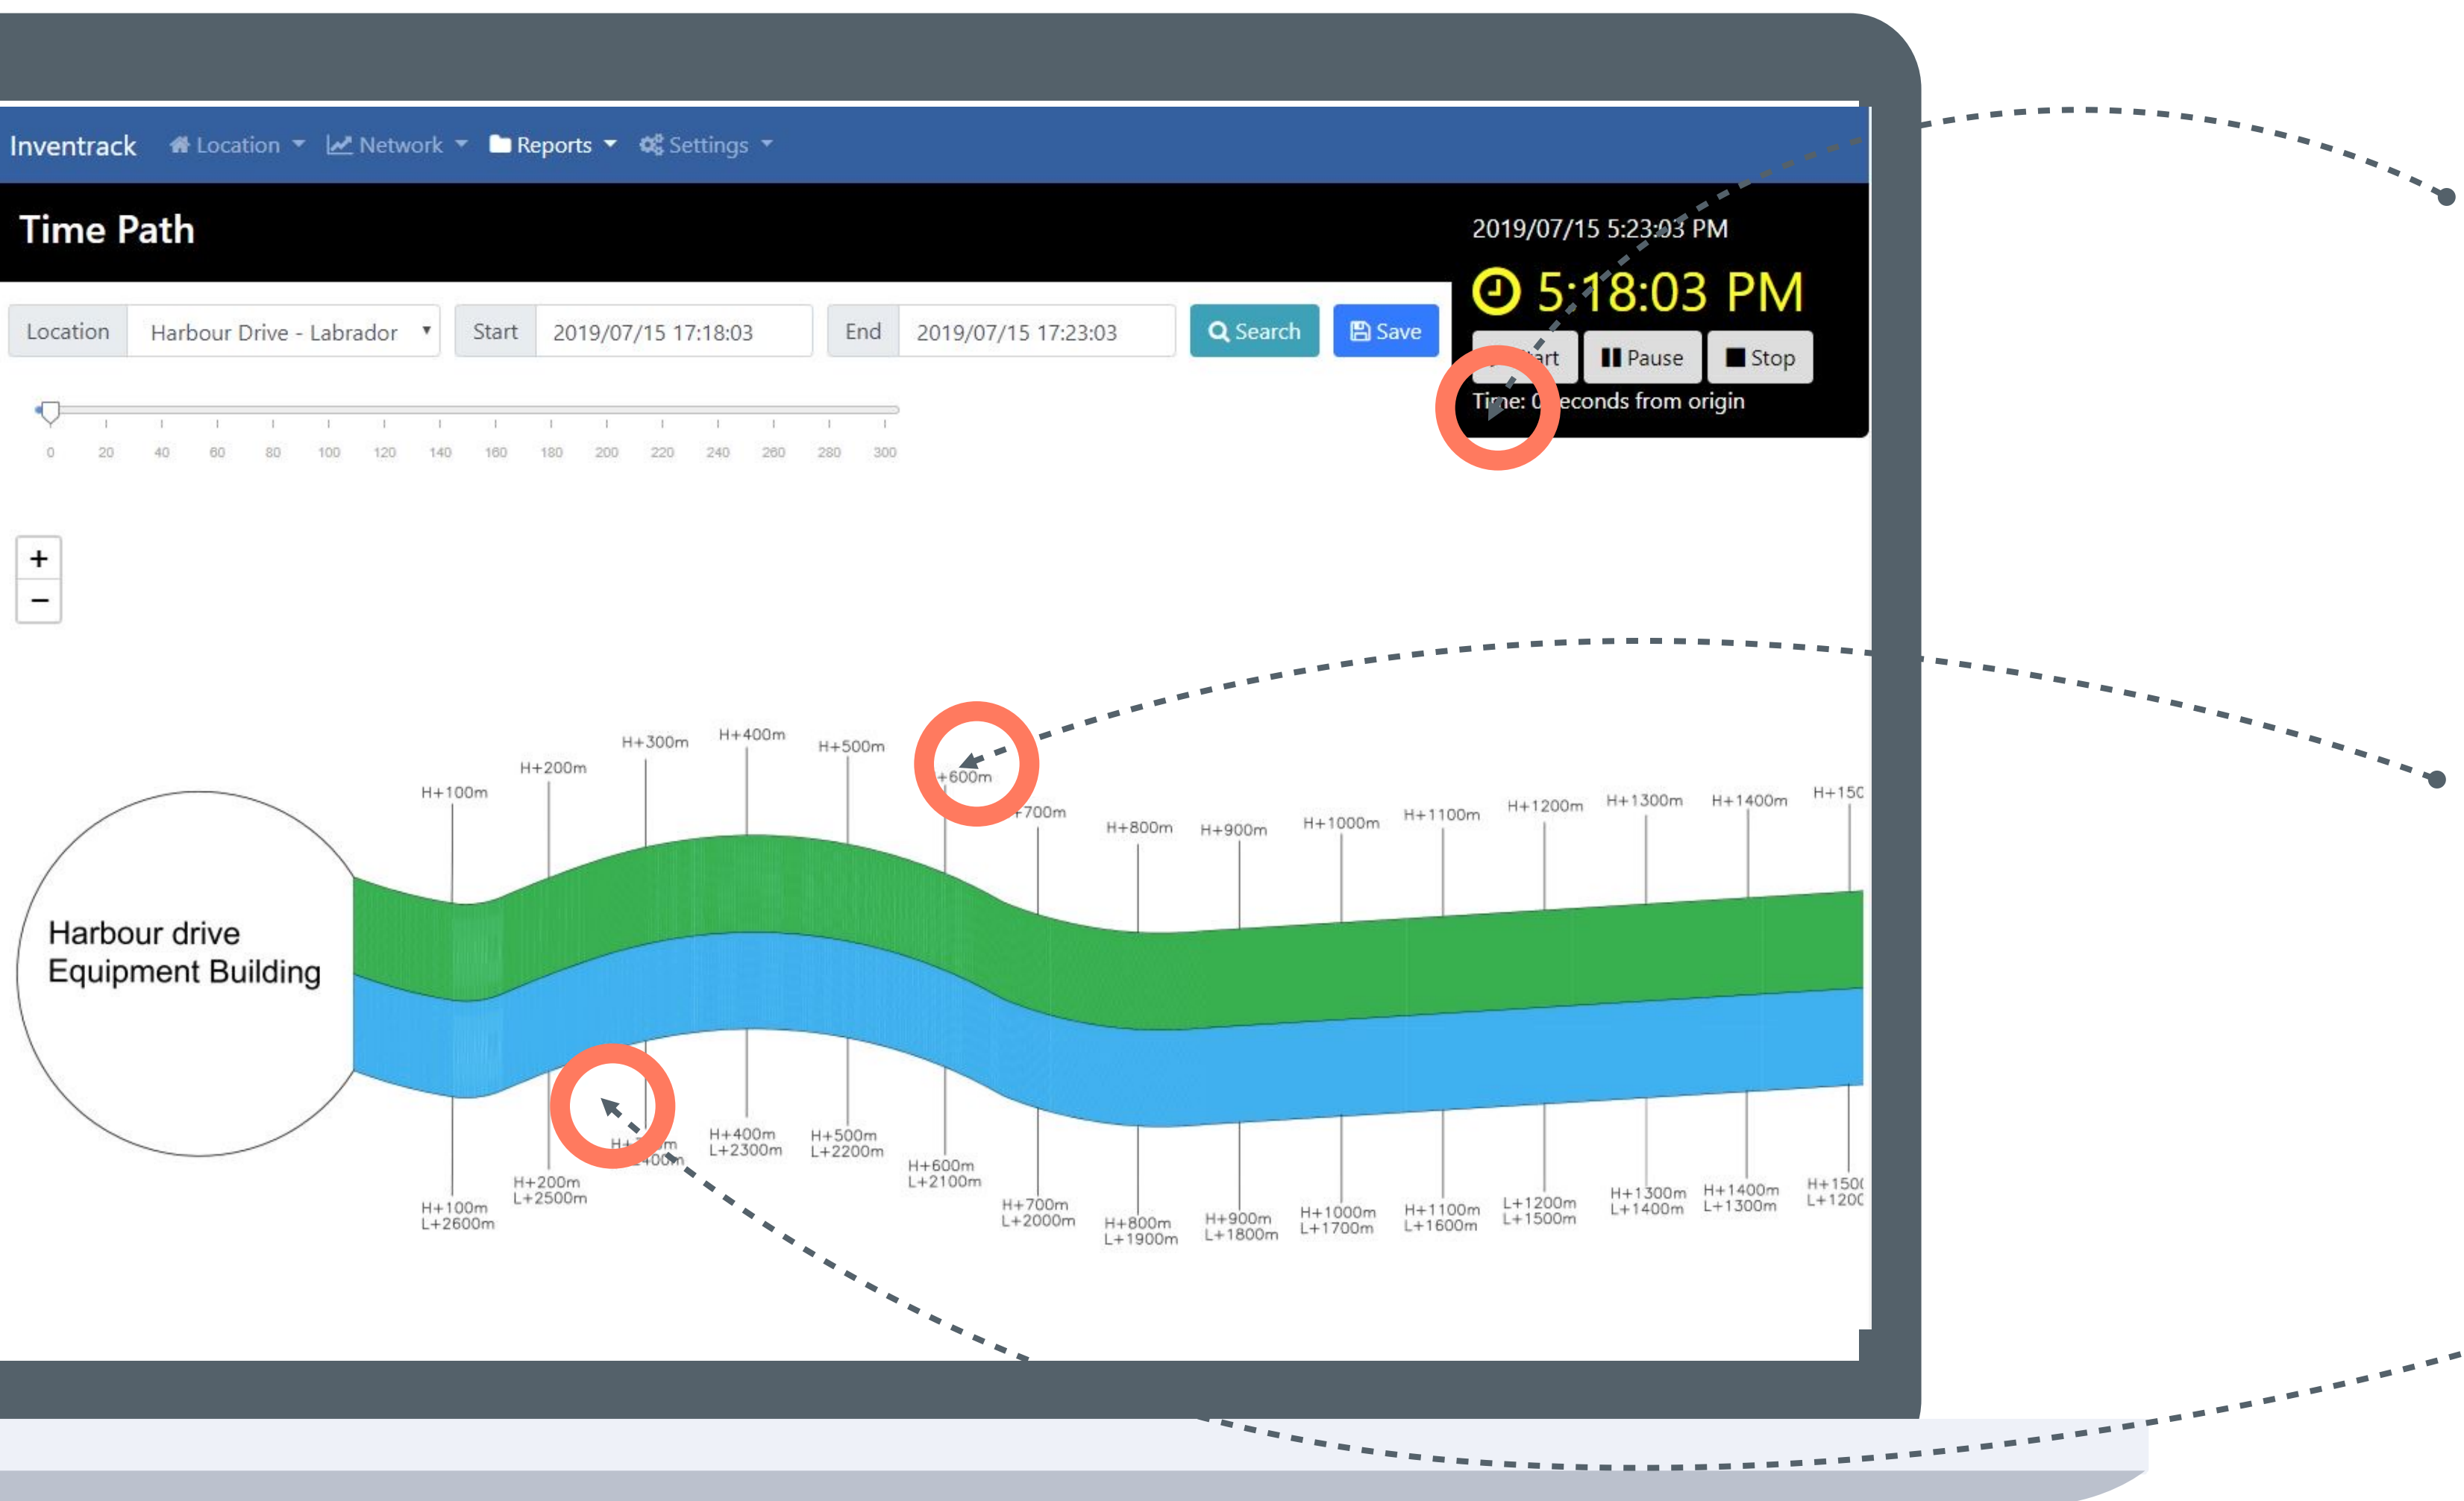

2

Feature:
Maps with multi zoom layers.

3

Feature:
Display large no of data and also no of tags in one locations

Historical Playback Feature

1

Feature:

Video Playback based on given time and save snapshot.

2

Feature:

Movement based on real-data captured

3

Feature:

Quick scroll and fast forward feature to view incident during given period of time.

1

Elegant and Small Size Device with Reading Range of up to 100m. Supporting standard BLE type of devices with ability to repeat signal through wireless and relay message back to host system.

2

Useful in Access Control (Vehicle or Person), Building Automation, Site Safety, Asset Management and Others

3

High throughput BLE location scanner to monitor positions of Smart Beacons quickly and faster than normal industry standards.

4

Highly versatile software with customization GUI to visualize location and positioning as well as ability to integrate to mobile phones via App or other important system such as Fire Safety System and Etc.

Site Safety

Description:

Useful in lone-worker protection and site safety such as tunnel, confined area or constructions sites.

Asset Tracking

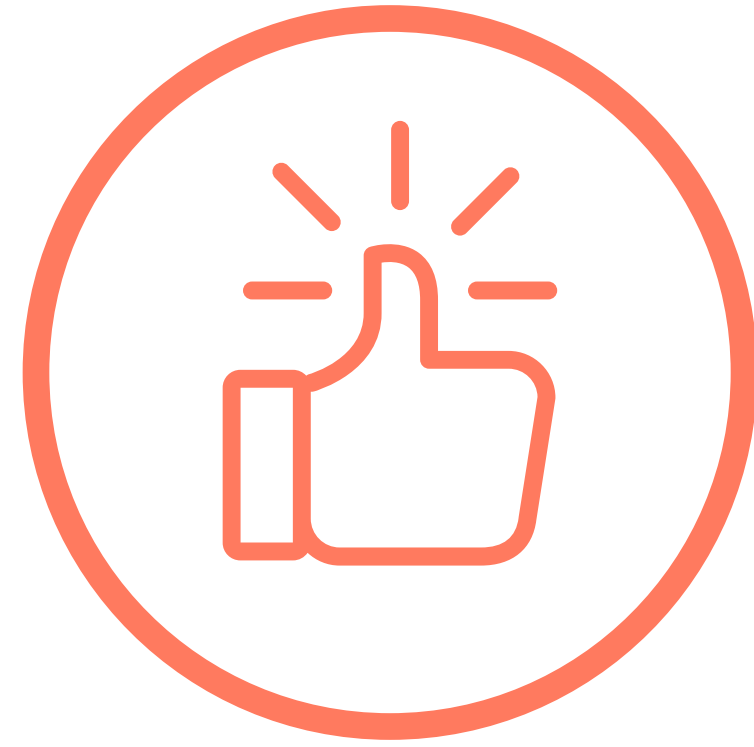

Description:

Ability to monitor movement of assets within large premises or area of coverage.

Smart City

Description:

Artificial intelligence in process automation such as AI and Indoor Positioning provides guidance to workers and users alike.
